

PROJECT PROFILE

PARKING DECKS

PROJECT

Burger King World Headquarters
17777 Old Cutler Road
Miami, FL 33157

ARCHITECT

Hellmuth, Obata & Kassabaum
100 N. Broadway 21st Floor
St. Louis, Mo 63102

DETAILS

K-13® Beige
90,000 Square Feet
2.75" Thickness

K-13 Spray insulation has been installed to over 90,000 square feet of parking deck ceilings in Burger King's World Headquarters which are directly below conditioned spaces. Sprayed to a thickness of 2.75", K-13 provides an R value of over 12 to the concrete/floor ceiling assembly.

The color scheme for Burger King's World Headquarters is predominantly earth tones and K-13 Beige was selected to meet this color schedule. K-13 is available in white, grey, black, tan, beige and specially matched colors are also a design option.

K-13 utilizes a patented adhesive system which provides a strong durable bond to virtually any substrate including concrete, metal, wood, glass, styrofoam and urethane. This adhesive system also provides K-13 the capability of being installed up to 3" thick in one application, greatly reducing the installation time of high R value installations such as the Burger King project.

The spray application of K-13 conforms to any surface configuration and eliminates voids, gaps and compressions that occur with prefabricated insulations. This monolithic coating results in the outstanding field performance of K-13.

K-13 can be specified to provide virtually any building's thermal, acoustical and aesthetic requirements. Parking decks, crawl spaces, and loading docks are a small sample of the areas in which K-13 can be utilized. Contact ICC at **(800)444-1252** for complete details on how K-13 can benefit your project.
